

CPU Vel0 consolidation: migration and time-step differences

Native BI4 pressure / position | migration: 201 frames | time-step comparison: 85 common-time frames

—●— Migration / 10 us -*- Migration / 5 us —●— Step halving / high-low -*- Step halving / double

Log scales; exact zeros are not drawn. Missing common-time samples break the lines; no interpolation is used.

Step comparison excludes 116 misaligned frames (time tolerance 1e-11 s). Step sensitivity is not true error.

Source: tests/logs/pore_double_vel0/differences.csv. Migration = double minus high/low; step = 5 us minus 10 us.
